About Me

I am a Data Analyst enthusiast with a background in Information Technology and hands-on experience in analytics projects. Through projects in sales analytics, I cleaned and analyzed 254,000+ B2B transaction records worth \$11.95B in aggregate sales, and built Tableau dashboards that surfaced hospital branches operating at up to 160% capacity. I am currently expanding my analytical capabilities through hands-on projects involving Python, SQL, Tableau, Power BI, and Spreadsheet. I enjoy transforming data into actionable insights and am eager to contribute my analytical capabilities while continuously growing in a data-driven environment.

Education

RevoU

Feb 2026 - Jun 2026

Full Stack Data Analyst

- Completed an intensive Full Stack Data Analytics program covering SQL, Python, Spreadsheet, Tableau, statistics, and end-to-end analytics projects.

CCIT Faculty of Engineering, Universitas Indonesia

Jul 2018 - Oct 2020

Associate Degree in Software Engineering | GPA: 3.27

- Built foundational knowledge in software development, databases, system analysis, and application development through project-based learning.

Project Experiences

Pharmaceutical Sales Performance Analysis | RevoU

Apr 2026 - Jun 2026

- Cleaned and blended a dataset of 254,000+ transaction and product return records using Python, conducting a deep-dive portfolio analysis on \$11.95B in aggregate historical B2B sales across 372 active clients to support advanced sales analysis
- Developed a Tableau dashboard that visualized multi-year sales performance across 2 regions and enabled trend identification for strategic decision-making.

Revo Hospital Dashboard | RevoU

May 2026 - May 2026

- Analyzed 5,000 hospital operational records (2024–2025) using Tableau and Spreadsheet to evaluate healthcare performance across branches.
- Identified branches exceeding 100% occupancy rates, with the highest reaching approximately 160%, indicating potential capacity constraints.
- Proposed strategic recommendations including capacity optimization, discharge management improvements, and resource allocation initiatives to enhance service quality and 10 % operational efficiency

Data Science Virtual Internship | Sribu

Nov 2024 - Jan 2025

- Processed and analyzed customer transaction data containing 8,233 records and 10 variables to understand customer purchasing behavior.
- Applied Recency, Frequency, Monetary (RFM) analysis and K-Means clustering to segment customers into distinct groups based on engagement and spending patterns.
- Identified high-value customer segments and generated insights to support targeted marketing and customer retention strategies.

Working Experiences

Retail Operations Assistant | Toko Zakaria (Family Grocery Business)

Oct 2020 - Present

- Served 40–60 customers daily, sustaining zero transaction errors and consistent service turnaround during peak hours
- Managed daily cash and digital transaction processing supporting IDR 15M+ in daily sales revenue with full reconciliation accuracy.
- Tracked inventory across 8 essential product categories and coordinated restocking schedules to maintain product availability for fast-moving items.

Additional Information

Technical Skills: Python, Spreadsheets, SQL, Tableau, Power BI, Statistic, Data Cleaning, Exploratory Data Analysis (EDA), Data Visualization

Soft Skills: Analytical Thinking, Logical Thinking, Communication, Collaboration

RevoU Data Analytics Full Stack

June 2026

[BNSP Certificate of Competence in Associate Data Scientist](#), Issued by Badan Nasional Sertifikasi Profesi (BNSP)

Nov 2024
